

OdorKlenz-Air®

Non-Invasive Odor Restoration

Turn your dehumidifier into a revolutionary odor restoration tool.

A broad array of odors and airborne chemicals may be present during water or sewer restoration. OdorKlenz-Air can reduce the total contamination in the air and prevent the spread of odors.

Often the basement or lowest level will suffer the bulk of the damage, but odors will spread polluting the remainder of the home. OdorKlenz-Air provides odor control during and after the removal of water or sewage, restoring the air in the home. OdorKlenz-Air has been used on water jobs to help people with chemical sensitivity issues related to the contaminants or restoration cleanup.

Highlights

Jobs

Use on all water jobs to promote a safe working environment and begin eliminating odors immediately.

Time

When set up at the beginning of the job, air quality levels can be restored in a matter of hours.

Safe

Proven safe through extensive testing and the only non-invasive option available for odor restoration.

Proven

Field tested and approved! Backed by extensive third party research.
